Electronic Referral/Order

EHE Health Information Exchange (EHE HIE) enables building of infrastructure for implementation of various clinical and administrative processes in healthcare domain.

Benefits:

- Enables the digital transformation of health processes
- Allows sharing of patient's vital medical information electronically improving the speed, quality, safety and cost of patient care
- Ensures all healthcare stakeholders' access to important information
- Supports encounter management Enables immunization programs
- Aids insurance stakeholders to actively participate in the processes
- Provides patients with access to clinical information.

Key features:

- Based on modern healthcare standards HL7 FHIR
- Certified support of IHE profiles
- Extensive experience and knowledge built into product
- Customizable security mechanisms that ensure patient privacy and secure access to medical data
- Role based access control with OAuth 2.0 and OpenID Connect Protocols.
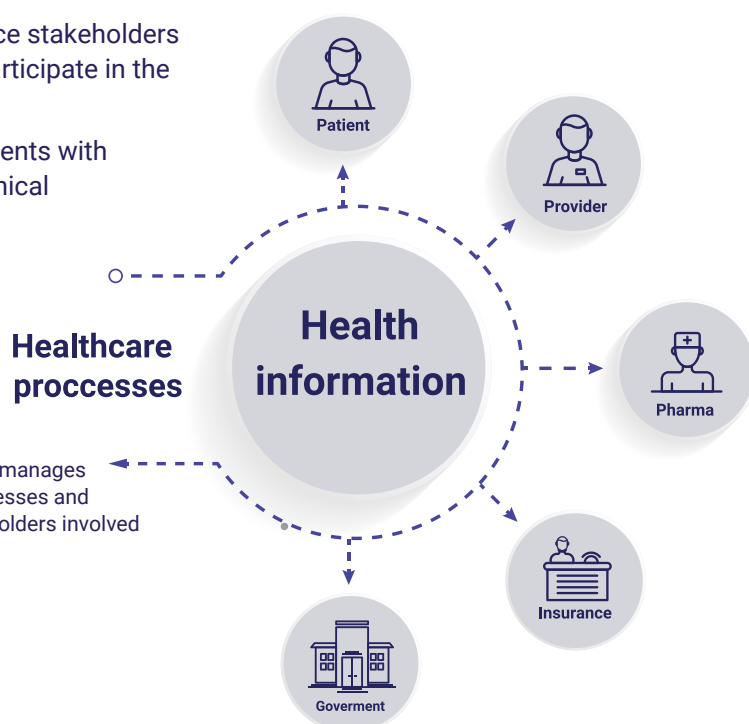

EHE HIE is based on the comprehensive, innovative, and proven **Electronic Healthcare Exchange (EHE)** product portfolio. Appropriate and secure access to healthcare information is of paramount importance for the **EHE HIE** solution.

Electronic Healthcare Exchange is a line of products fulfilling a variety of eHealth system needs, ranging from fundamental ones like infrastructure/security/integration, over exchange and management of clinical documents and discrete medical information, to advanced functionalities like clinical decision support.

Solutions made of different **EHE products**, alone or through integration with existing infrastructure, support a wide range of processes in the healthcare system.
